Abdullah Alharbi

AI Engineer | Artificial Intelligence Graduat

abdullahomalharbi@gmail.com 0566128561 linkedin.com/in/abdullah-alahmadi1

PROFILE

Artificial Intelligence graduate with hands-on experience designing and building intelligent systems across Agentic AI, computer vision, machine learning, and LLM applications. Experienced in developing multi-agent workflows, RAG pipelines, AI automation, model fine-tuning, and end-to-end AI solutions using modern frameworks and APIs. Strong problem-solving mindset with a focus on building reliable, scalable, and impactful AI systems for real-world use cases.

EDUCATION

Agentic AI Engineering Bootcamp 08/2026 – 10/2026
Saudi Digital Academy (SDA) Riyadh, Saudi Arabia

B.Sc. in Artificial Intelligence 2022 – 2026
Umm Al-Qura University Makkah, Saudi Arabia

EXPERIENCE

AI Student — KAUST Academy 02/2026 – 02/2026
Makkah, Saudi Arabia
Completed an intensive 80-hour Advanced AI training program covering Computer Vision fundamentals including Transfer Learning, Image Segmentation, Object Detection, and Data Augmentation. Delivered by KAUST faculty in collaboration with UQU.

AI Intern — Deep Scan Technologies 03/2025 – 08/2025
Riyadh, Saudi Arabia
Worked on building and optimizing AI agents for Nabrah, a voice-based product for smart automated interactions. Developed voice and text response workflows using n8n and GPT-based models. Integrated ElevenLabs and Whisper to automate real-time phone and message replies with natural language understanding and speech synthesis.

PROJECTS

Nabeeh — Autonomous Industrial Safety Supervisor 08/2026 – 10/2026
Built a multi-agent AI safety system combining YOLO26, ByteTrack, LangGraph, RAG, FAISS, FastAPI, and SQLite to detect construction-site PPE violations and generate context-aware, regulation-grounded recommendations. Designed three specialized agents with tool calling, memory, 12 guardrails, and human approval for critical actions. Achieved 0.817 mAP50, 1.00 retrieval recall@3, and 670 passing automated tests

IronID — AI Fitness Coach App 10/2025 – 12/2025
Built a fully local fitness app that identifies equipment and delivers bilingual tutorials without cloud latency. I compressed a MobileNetV3 model using pruning and quantization, cutting the size to 5.7MB and achieving 99.02% accuracy. The vision system is paired with a GPT-3.5-turbo routine generator and reliably shipped via GitHub Actions.

SHEFAA — Arabic Medical Q&A System 12/2024 – 02/2025
Fine-tuned the Jais-family-256m model using QLoRA on the AHQAD dataset to build an Arabic medical question-answering system. Applied advanced Arabic text normalization and achieved strong BLEU, ROUGE, and BERTScore metrics with optimized memory usage.

SKILLS

Languages & Frameworks : Python, PyTorch, Transformers, LangChain, LangGraph, scikit-learn, OpenCV, NumPy

Agentic AI & LLM Systems : RAG Pipelines, Multi-Agent Systems, Function Calling / Tool Use, Prompt Engineering, Vector Databases, LLM Evaluation (BLEU, ROUGE, BERTScore)

AI / ML : Deep Learning, Computer Vision, NLP, LLMs, Voice AI, Fine-Tuning (QLoRA), Model Compression (Pruning & Quantization), 3D CNNs

Tools & Platforms :Hugging Face, Gradio, n8n, ElevenLabs, Whisper, OpenAI API, Git, GitHub Actions

LANGUAGES

Arabic — Native/Bilingual

English — Proficient
